

## CLAIMS

1. A system for providing printed information to a user that is obtained from a first server means of a first party, the system including:

5 a user printer module being provided by a second party for interfacing the user with the first server means, the module being responsive to the user requesting first information from the first server means for generating a first printed media that displays the first information;

10 identifier means of a third party for providing the first printed media with an identifier such that designation of the identifier by the user results in the module communicating second information to the first server means or to a second server means of a fourth party; and

account means for providing payments to the third party and for receiving payments from one or more of the first party, the second party and the fourth party.

15

2. A system according to claim 1 including calculation means which is responsive to the identifier means and/or the module for determining the quantum of the payments.

20 3. A system according to claim 1 including a plurality of modules provided to respective users, wherein the calculation means is responsive to the number of first media printed by the modules for determining the quantum of the payment received from one or more of the first, second and fourth parties.

25 4. A system according to claim 3 wherein the calculation means is responsive to the number of occurrences of second information being sent to the first server means or the second server means for determining the quantum of the payment from the first party or the fourth party respectively.

5

7. A system according to claim 1 wherein the fourth party is an on-line vendor and  
10 the second information received by the fourth party is indicative of an order by the user  
for goods and/or services provided by the vendor.

8. A system according to claim 7 wherein the calculation means is responsive to the value and/or quantity of the goods and/or services ordered for determining the quantum of the payment from the vendor.

9. A system according to claim 7 including a plurality of respective on-line vendors wherein the calculation means determines the payments from those vendors in proportion to the value of the goods and/or services ordered by the user from the respective vendors.

~~10. A system according to claim 1 wherein the account means provides payments to the second party.~~

NPB003US

13. A system according to claim 12 wherein each party has a respective account from which payments are transferred to or from, as the case may be.

10 15. A system according to claim 1 wherein, upon receipt of the second information  
by the first server means or the second server means, the system generates a second  
printed media that displays third information which is derived from the first party or the  
fourth party respectively.

15 16. A system according to claim 15 wherein the second printed media is generated by the module.

17. A system according to claim 16 wherein the identifier means provides the second printed media with a second identifier such that designation of the second  
20 identifier by the user results in the module communicating fourth information to the first server means or the second server means.

18. A system according to claim 17 wherein the calculation means is responsive to the number of occurrences of the fourth information being communicated.

19. A system according to claim 1 wherein the first printed media includes fifth information in addition to the first information.

21. A system according to claim 20 wherein the calculation means is responsive to  
5 the number of first media printed for determining the quantum of the payment from the  
fifth party.

10

24. A system according to claim 1 wherein the identifier means stores first and  
15 second page data indicative of the first printed media and the second printed media  
respectively.

20

27. A system according to claim 26 wherein the module determines the function by  
25 obtaining the mapping data from the identifier means.

NPB003US

29. A system according to claim 25 wherein the function includes one or more of:

- placing an order for goods and/ or services;
- paying a bill;
- accessing a bank account;
- corresponding with a predetermined party; and
- accessing predetermined information.

31. A system according to claim 30 wherein the module has a cache for storing the  
15 mapping data.

20

34. A system according to claim 1 wherein the identifier is printed on the respective  
25 printed media.

NPB003US

36. A system for providing printed information to a user that is obtained from a first server of a first party, the system including:

- 15
